Definition Use Benefits Role of ELRA

The term **Language Resource** refers to a set of speech or language data and descriptions in machine readable form, used for building, improving or evaluating natural language and speech algorithms or systems, or, as core resources for the software localisation and language services industries, for language studies, electronic publishing, international transactions, subject-area specialists and end users.

Examples of Language Resources are **written** and **spoken corpora**, **computational lexica**, **terminology databases**, **speech collection**, etc. Basic software tools are also important for the acquisition, preparation, collection, management, customisation and use of these Language Resources and other resources.
